

Azithromycin Combination for Emesis Control in Dogs

Abstract

The invention is directed to a method of treating cancer or a bacterial or protozoal infection in a mammalian subject in need of such treatment. The method comprises the  
5 adjunctive administration of pharmaceutically effective amounts of a macrolide antibiotic and a Substance P antagonist. The invention also encompasses a method of preventing or treating emesis associated with macrolide antibiotic administration. The invention further encompasses novel compositions comprising a macrolide antibiotic and a Substance P antagonist.
